

### Jeremy Rifkin

Author of 17 bestselling books Mr. Rifkin is the founder and president of The Foundation on Economic Trends ([www.foet.org](http://www.foet.org)) in Bethesda, MD. The Foundation examines the economic, environmental, social and cultural impacts of new technologies introduced into the global economy.

“This has specific advantages of a controlled situation that you cannot do in nature. Because everything is controlled digitally, it’s quantifiable: you can see results in specific disorders. It’s also great for patients in a hospital who are denied all the life affirming smells that integrate human nature.”

“The Multisensory Stimulation System provides an opportunity for people to reintegrate their senses and could play an important role as a new kind of learning tool one designed to give the human brain a heightened sense of context. So much of contemporary learning relies almost exclusively on visual imagery and auditory signals that we risk a deep loss of the more

intimate senses of taste, touch, and most importantly smell. While the visual sense is the most detached and objective of the senses, and the one most identified with aggression and expropriation, the much neglected intimate senses are far more important in establishing a sense of embeddedness between people and the larger communities and environments in which they live.”

“In an era characterized by increasing globalization, complexity, and vulnerability, it is imperative to create new tools that help the individual develop a holistic mental framework. The Multisensory Stimulation System is a breakthrough technology that if used as a learning tool \_ and not simply as an entertainment medium \_ would help prepare us to more fully use the full range of senses and become more integrated with the life that surrounds.”

### Mikki Willis

Filmmaker, Media and Event Producer; founder and CEO of ELEVATE

ELEVATE is a media and technology company committed to socially and environmentally conscious content.  
<http://Elevate.us/>

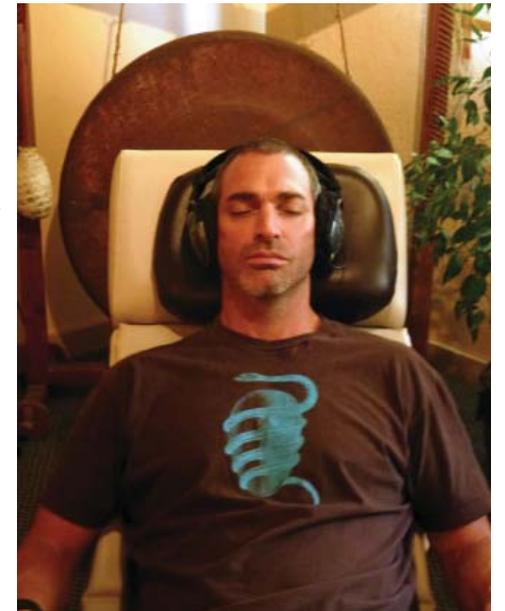

“This is an extraordinary step in a futuristic direction.”

“I drifted off (in memory) to all of the films that transport people to other dimensions... but to be involved in the experience and actually go on the journey is what this technology is providing. That was quite an amazing experience to leave this dimension and experience all these incredible sounds, senses, its very effective very impressive.”

“I can feel the senses of my body open and stimulated and a great sense of alertness matched with a great sense of grounding and peace at the same time.”

“What I recognize is the importance of having an experience like this that rejuvenates our body. I can actually feel my circulation has increased. I feel my breathing capacity has expanded. I can feel that my general vibration and vitality has been elevated. It’s very clear this is a very necessary thing for all of us setting at jobs in front of computers for hours on end.”

May 2, 2013 @ the Well, Ojai, CA

## Peggy La Cerra, Ph.D.

Director, Center for Evolutionary Neuroscience and Author, "The Origin of Minds".

"This system is a fantastic voyage machine. It creates multi-dimensional mind-body experiences by transmitting auditory, tactile and olfactory stimuli in well-orchestrated, inventive programs, each one designed to transport the passenger to another beautiful world or dimension. This remarkable system has the capacity to enhance an individual's sense of well-being and effect positive change".

## Dan Mapes

President and Co-founder of MagNet Solutions in Los Angeles. MagNet ([www.magnet.tv](http://www.magnet.tv))

"I particularly liked the system's ability to be fully interactive, which is a major breakthrough since it allows each individual to have a completely unique experience each time, one that draws you back for another and has a profound effect on you."

"Given the stressful times we live in, the greatest immediate sales potential lies in supplying spas, resorts and alternative healthcare providers with a new tool that can support their efforts to relax and enhance the immune systems of their clients."

## Robert Tisserand

Aromatherapy Author and Consultant

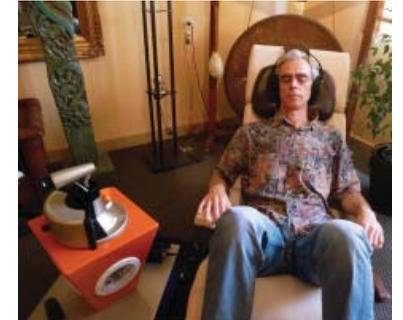

<http://roberttisserand.com/>

"Regarding AromaComposer technology: "Very impressive. ...There is nothing like this technology that I have seen in my world travels with this level of sophistication."

"The Quality of the sound and vibration is right up there .Your technology will bring it (the aromatic experience) up to the level of the other senses."

"When you say the cost of the oils isn't a big factor that is huge, because there are some particular pricey oils that would work incredibly well."

## Mark Peltier

Co-founder of AromaSys, Inc; Developed and popularized technology in 1991 for putting high quality aromas into ventilation systems of large environments including some of the world's most renowned hotels, resorts and casinos.

"Very simply it works... it works extremely well . All the components readily exist to employ digital signals to manipulate sound, sight and now scent to create incredibly complex or simple aroma compositions delivered to the individual in a manner which are completely and totally synchronized with imagery and sound."

"The AromaComposer is capable of delivering a very complex aroma blend and a very specific aroma for the subtle manipulation of the blend very quickly. The intensity was absolutely perfect and can be adjusted depending upon the application or user preference."

"I feel the present design represents an opportunity to create extraordinary interesting aromas that could be very affective for delight , entertainment or therapeutic applications." ■
